

Liquid Guitar

**Musicians Life,
www.musicianslife.de**

Liquid Guitar offers a well structured and comprehensive library with acoustic and electric guitarlicks.

Most of the licks were played by Kai Reuter, a guitar virtuoso who is known for his wide range of guitar techniques and repertoires; the library is the best and most impressive proof for it. From slow melodies to fast riffs à la Al Di Meola, this library includes everything your heart desires.

(...)

With the help of the editing possibilities of Liquid you can change single notes out of a lick to create many different variations. Thus the content of the library is by far not the limitation of it but should be seen as a large basis for experimenting in the field of solo-guitar science.

In contrast to usual sample-libraries Liquid Guitar guarantees flexibility without losing the quality of sound. Especially the sound of a guitar can be stretched almost as much as you like without sounding unnatural and the pitch change is by far higher than for example vocals.
