(...)

Conclusion

Horn Section is a new enrichment for the Liquid Instrument Series. Instead of postulated horns you'll find a wide spectrum of woodwinds and brasses, tailored for the arrangement of complete horn sections. But no alternative to the solo brasses Liquid Trumpet and Saxophone.

As expected also this library convinces with the quality of sound. All licks can be changed in tempo and scale and thanks to the Melodyne-Algorithm the outcome is still on the highest level. The stability of this program is also creditable. We experienced no difficulties on our system (Mac G5 DUAL 1,8 GHz PPC, OSX 10.4.10, Host: Cubase 4.1).

Within the 600 mb library you'll find almost everything you need for a complete horn section. Of course you could also play some chords with an usual sampler but you'll never achieve the liquid sound experience given with this plug-in.
