Especially electronic productions profit from the dynamic of live recorded instruments. Percussionfans will find 4200 loops for complex arrangements or to pimp their songs. The 3.4 GB library includes high-quality loops from over 60 different percussioninstruments and different styles such as latin, oriental and african, all recorded without additional effects.

The intuitive interface keeps a browser to select the loops and an easy editor that allows you to change the audiomaterial as flexible as MIDI.

Conclusion:

The big advantage of Liquid Percussion is that you can create authentic percussion lines even without knowing the secrets behind the technique to play the instruments or arrange the rhythm. Besides that the Melodyne engine allows unique effects that can not be created with an usual sample player. Thanks to the comfortable function to map whole loops to MIDI notes an arranging via MIDI is very easy.

The library knows how to score, not only in quality of sound but also in the stylistic bandwidth.
